2: Lévi-Strauss E-5 (1938-1939)1948
SP17 Nambicuara SP17

When rains come, the *Nambicuara* settle in temporary villages, and the men open circular gardens in the gallery forest by burning and felling the trees with stone (now steel) axes. They till the soil with pointed sticks and raise both bitter and sweet manioc, several kinds of maize which are different from those of their more civilized neighbors (Roquette-Pinto, 1938, p. 297 n.), beans, gourds, cotton, urucú, and a variety of small tobacco with tiny leaves. Despite the difficulty of fishing in the deep, clear tributaries of the Juruena River, they have moderate success using fish arrows, basket traps, and a drug made of a vine.

Food preparation.—Game is usually only half cooked in hot ashes, but it is sometimes smoked on rectangular or pyramidal babracots. Manioc is grated on thorns of the catinal palm (*Iriartea* sp.) imbedded in palm wood planks. To remove the poisonous juice of bitter manioc, the pulp is either squeezed in a strip of bark twisted spirally or buried for several days to allow the juice to drain off. Balls of the pulp are then sun-dried and packed in leaves in baskets or buried at marked places. In times of scarcity, perhaps months later, the half-rotten balls are made into flat cakes, hastily cooked in hot ashes, and eaten.

The *Nambicuara* cannot bear to eat salt, which they do not know how to prepare, or pepper, which they do not cultivate. Even hot food is cooled with water before it is eaten. Wild honey, too, is diluted with water. The only condiment is a variety of cumaru bean which has a strong, bitter almond taste. It is boiled in pots; afterward the liquid is drunk and the beans are mixed with food, especially with grasshoppers crushed in mortars. Armadillo meat is often ground with maize flour.

Domestic animals and pets.—The *Nambicuara* have many pets, especially monkeys, coatis, parrots, and birds. Domesticated animals were unknown until the Rondón Commission introduced chickens and dogs. Although at first extremely afraid of dogs, the Indians quickly adopted them and treated them with the same deep affection they show all their tame animals. Even now they are terrified by oxen seen at telegraph stations, and call them by the name given to the deadly spirits of the water and the bush. They do, however, hunt and eat horses and mules as if they were wild game.

HOUSES

The surprising variety of house types suggests recent borrowing from neighboring tribes. The *Nambicuara*, like the *Siriono*, may formerly have lacked houses entirely. During most of the year, even at the present time, they build only scanty temporary shelters for a single night. These consist of branches of palms stuck into holes dug in the sand to form a half or quarter circle on the side from which the sun, the wind, or rain are expected (pl. 37, *center, left*). Each individual family builds its own

[276] It is a curious fact that palm cabbage (palmito) is not utilized by the Serra do Norte Indians. Gabriel Soares [234] made it clear in 1587 that the aborigines of the coast prized the leaf buds of the palm tree: "Stupendous palm cabbages, five or six spans in length and as thick as a man's leg, are extracted from the buds of these palms."

[273] Pineapple wine was a common beverage, for Soares goes on to say: "The nature of this fruit is hot and humid, and it is very harmful [277] to those with open wounds or sores; the same pineapples, when green [251] are good for curing sores, for their juice eats away all the rotten and [274] putrid flesh, and the aborigines know this; in such wise does this fruit eat away, that they use its rind to wipe off the rust from their swords and knives and to remove the stains from the clothes they wash; when ripe, the juice is used by the Indians to make a wine which inebriates them; to this end they pluck the fruit not quite ripe, on account of its being more sour..."

● 263 The Indians of the Serra do Norte found our salted food unpleasant. They often refused the plates we set before them, giving us to understand that it was the salty flavor which led them to behave in this manner.

262 Milk (condensed milk) was also rejected in the beginning; they would make a face and say that it was human milk and therefore repulsive: [235] "Anungá!"

261 One must know the Indians' gluttony, their insatiable hunger, their continual, unfailing, artless, persistent animus devorandi, fully to comprehend the disgust which led them to such a renunciation.

262 The children are given to eat of everything; no matter what 855 goes into an Indian's mouth, there is always a crumb for the little one who walks beside him or rests in his arms.

274 Even the stimulants they use--tobacco, for instance--are shared 855 with the children. More than once I had the opportunity to observe Indians giving cigarettes to children under two. (1)
